Hacking?... i want to install 2 of my 3 topo maps on my gps but im unable to do it.. i tried to install them on my extender but it only worked with 1 map.. so i decided to install them in my computer but the same thing happened.. any help would be great.. thnx Networked GPS/Glonass GPS?... Hi, I have similar problems. I have a Topo NZ PrimeTopo, which I got years ago from a neighbor (already used). My GPS tracks the signal from NZ PrimeTopo and has no problem in pinpointing my position if I have the correct location data. . . However when I start using my own location data I don't get the pinpoint signal. It will just track me for a few minutes if I drive slowly with my location data in. . If I use GPS-track instead of the actual location data (via Track) I get pinpoint signal. I have been at it for months now and I think I am nearly through. . Just in case anybody else is looking for help. .. I have an XT-6100, a kampfnet gpsv3 and gps device on my computer. . I want to hook up a strapine GPS (SPAN,, maybe SPSite?) and get location data from a arduino. . I just don't know how/where to start. . I have tried with the GPS devices I have and the arduino, but I can't get the pinpoint signal using the default tracking. . How do I get the track data with the default tracking? . At the moment I am using nothing as a reference but the default settings in the Topo NZ PrimeTopo. . I have spent literally months looking for help and suggestions. . I am desperatly searching for help. Thank you for any help. Thanks . Networked GPS/Glonass GPS?... Hi, I have similar problems. I have a Topo NZ PrimeTopo, which I got years ago from a neighbor (already used). using select select -- select query - posts select date, id, content from -- (table) posts ; -- result
14-mar-2016 09:13:26 14-mar-2016 3 14-mar-2016 4 14-mar-2016 2 14-mar-2016 1 14-mar-2016 3
14-mar-2016 1 14-mar-2016 5 14-mar-2016 2 14-mar-2016 2 -- 147 characters displayed Please
help. Please tell what I can do to fix this issue. A: Try using the QUICK command instead of the
normal SELECT statement. I think you are passing in more columns than the table has. Q: How to get
last modified date in Kendo UI grid from JavaScript/Jquery? I need to get last modified date from grid
source. Following is my code: function GetDate(e) { var mydate =
parseDate(e.cell.metadata.lastModified); alert(mydate); } mygrid.on("click", function (e) {
GetDate(e); }); Following is the parseDate method: function parseDate(inp) { var calendar =
kendo.ui.Calendar({ value: "..." }); var date = new Date(inp); if (date.getTime() - calendar.getTime()
> 0) { return date; } else { return new Date(date.getTime() + 1); } } The code above is to show last
modified date of the grid. How do I get it from JavaScript/Jquery? A: You can use a Kendo UI Grid's
DataBound event to do the Date object conversion and parsing, in a simple manner: function
ParseLastModified(e) { var mydate = e.sender.dataItem.lastModified; if (Date.parse(mydate) ==
Date.parse(new Date())) { return new
