SOURCE: www.crackz4me.com ISO is the abbreviation for the "International Organization for Standardization". It was launched in America in 1947 and now, ISO has over 164 members. Currently, ISO is the largest and most popular organization to standardize worldwide organizations. They have offices in both Canada and Germany, which help them reach their objectives. ISO also provides training and certification systems for its members to operate with efficiency and consistency. Each year, they issue a large number of standards regarding different fields such as language (ISO 639), chemistry (ISO 23270:2003), mathematics (ISO 80000-2:2006), energy (ISO 50001:2011) etc. Recently, they issued a large number of standards regarding medical care (ISO 13485). ISO 27001 is the most comprehensive data security standard. This standard is based on the best practices of different countries. It provides complete instructions about different types of data, procedures, processes and also implementation. This guide helps any organization to follow the best practices in order to avoid any type of risk connected with information technology systems. Due to its effectiveness, ISO 27001 has become one of the most popular standards in the world. ISO 27001 cost, or ISO27001 registration can be incurred by an organization for implementing and maintaining information systems. The purpose of this standard is to provide guidelines for Information Security Management System (ISMS) that can be adopted by an organization to avoid any threats such as theft and disruption. This standard can be implemented by an ISO 27001 Certification Company. If this standard is not followed by any organization, the company may face a legal action or a huge fine from its government. The following table illustrates the direct & indirect costs of ISO27001 registration: Besides these costs, there can be other expenses associated with implementing ISO27001 such as training costs and travel costs. So, while calculating the total cost of ISO 27001 implementation, it is important to consider all the possible expenses that may occur during that time period.

The common risks involved in information technology are categorized into different levels based on their nature and effect on an organization.
